Shallow-draught container Ro-Ro vessels for the Vessel Train

The presentation focuses on the concept design of an inland container Ro-Ro vessels adapted to low-water navigation conditions. The designs were developed within the framework of the H2020 project NOVIMAR (NOVel lwt and MARitime transport concepts) in which DST was one of the partners. In addition, the presentation gives a brief overview of evolution of research on shallow-draught inland cargo vessels which author conducted over the last ten years.

Dr.-Ing. Igor Bačkalov
